

Section 5:

Appendix A — Ecoflex Pressure Loss Charts

HDPE Piping

The following chart shows pressure loss per 100 feet at 160°F (71°C) for HDPE pipe sizes from 3/4" through 4" at a velocity ranging from 1 ft./second through 25 ft./second. General correction factors are listed in

the tables following the chart in this section. Refer to **Table 5-1** for correction factors for different temperatures. Refer to **Table 5-2** for correction factors for using glycol mix.

Pressure Loss and Velocity, HDPE Pipes
